PROFESSIONAL SUMMARY

Senior Full Stack Developer with 3+ years of continuous professional experience (May 2023–present) architecting and delivering scalable web applications, SaaS platforms, and desktop systems end to end — from database design and API architecture to frontend performance and production monitoring. I built and shipped a production Model Context Protocol (MCP) server integrating Claude Desktop with live business systems, exposing 60+ tools across project management, calendar, and health data, and I have optimised systems serving 100+ concurrent users with sub-50ms response times and 95% Redis cache hit rates. I work daily with US-based product and design teams, integrating AI APIs, building payment infrastructure, and delivering multilingual, cross-platform applications.
